

Introduction

INDEX30 tokens are basically shares at Index fund and buying token you will be immediately exposed to crypto market by 30 underlying assets. 90% of assets will be in cold storage and rest will be on hot wallets so we can perform re-balancing or hedging for better performance of the Fund. We set minimalist approach to our fund strategy. The market is complex mechanism even without short-term or over complicated strategies or additional emotional attachment to projects. Our goal is keeping things simple but effective and profitable as much as possible.

Why we think crypto stays here and replace some old structures? And even more, why we think it is one of the most technological improvement since dawn of internet? It gives people freedom of transfer, exchange and manage their own assets. You can transfer value to anyone around the globe without the third party or supervision from the Gov or corporations within few seconds and minimal fees. Yes, the infrastructure is still immature to mass adoption or usage on daily basis, services are still missing but the trend is clear.

Summary

INDEX30 contains 30 underlying assets chosen by our strategy and evaluation process, not just market capitalization which can be misleading indicator.

INDEX30 is hybrid of INDEX30 fund and active managed fund. At least 90% of all funds will be under passive management on cold wallets.

Another benefit of index fund is easier access to investing for general public, so they don't need to research and keep each asset on several different wallets. Or trying to pick one or two winners.

As a holder of INDEX30 you will be exposed to all crypto market through one token. The value of INDEX30 will be determined by underlying assets not just by speculations. After pre-ICO INDEX30 token will be traded on BitShares DEX platform and no further token will be issued.

INDEX30 is free from any bureaucratic procedures and you can invest in crypto within few clicks.

Process of analyzing projects

The number of coins or projects will be 30 and we are going to choose these by analyzing and comparing assets on the following points of interest:

1. Usability and actual usage - transactions history, fees, counts of generated wallets
2. Developer team
3. Maturity of project
4. Technology
5. Decentralization

These basics filters allow us to exclude shady projects or projects with low chance to success in long run.

We exclude marketcap as one of the main filters because it can be misleading indicator of future success. Similar is for volume on exchanges which can be simulated by bots

Fund & asset management

The fund will be hybrid of passive and active managed system. What we can learn from history of investing is that there are much more successful passive investing - index funds. But for quickly changing crypto industry we think there is need for hedge strategies as well, but with limited risks to overall portfolio. For this reason 90% of fund will be on cold wallet and rest on hot wallet for some re-balancing or hedge.

Forks or airdrops will be added to portfolio either as new asset or will be sold for accumulation of original asset. Depends on our projection or activity on new blockchain.

Security

We have in place the best security practices. We have three tiers system of handling wallets and tokens. First tier are hot wallets and multiple well know exchanges, second tier are HW wallets and third tier are cold offline wallets. Every access to assets is under two factor authentication and verification.

Reporting & Transparency

We will issue quarterly reports of all portfolio holdings, our trades and risk/return analysis and overall portfolio performance. Prediction on future market movements and our strategy for re balancing or including new projects. Reports will be available on our website and email.

Token Distribution and Structure

There will be no token creation after the ICO phase. It will be pre-ICO phase and early investors can purchase token directly on our page through email with fixed rate of 0.1\$ per INDEX30 token. For pre-ICO phase we will reserve 1000000 INDEX30. After this phase rest of all tokens can be purchase through DEX on bitshares platform.

1. Name: Bohemia Seed capital - Index fund
2. Symbol: INDEX30
3. Technology: Bitshares
4. Supply: 10 000 000 INDEX30
5. Public: 8 500 000 INDEX30
6. Team: 1 000 000 INDEX30
7. Community & Ecosystem: 500 000 INDEX30

Pre-ICO price 0.1\$ per INDEX30

Project Timeline

January 2019 - Official launch of the INDEX30 fund

February 2019 - Start of pre-ICO

March 2019 - Launch trading on Bitshares DEX platform

Q3 2019 - Propagation and advertisements, knowing core investors, people who are interested in project, hiring, trying to create a community.

Q4 2019 - Improving infrastructure, web and internal processes, getting new investors

Q2 2020 - Real Time performance of portfolio and holdings on web. Enable minimum liquidation price calculated from NAV.

2020+ - App for investors who want to invest regularly with fiat transfers. Within application will be our real time performance, open positions and reports, etc.
